

A Synergetic Approach with Multiple Tizen Devices

Yoonsu Kim / Michal Seklewski

Samsung Electronics

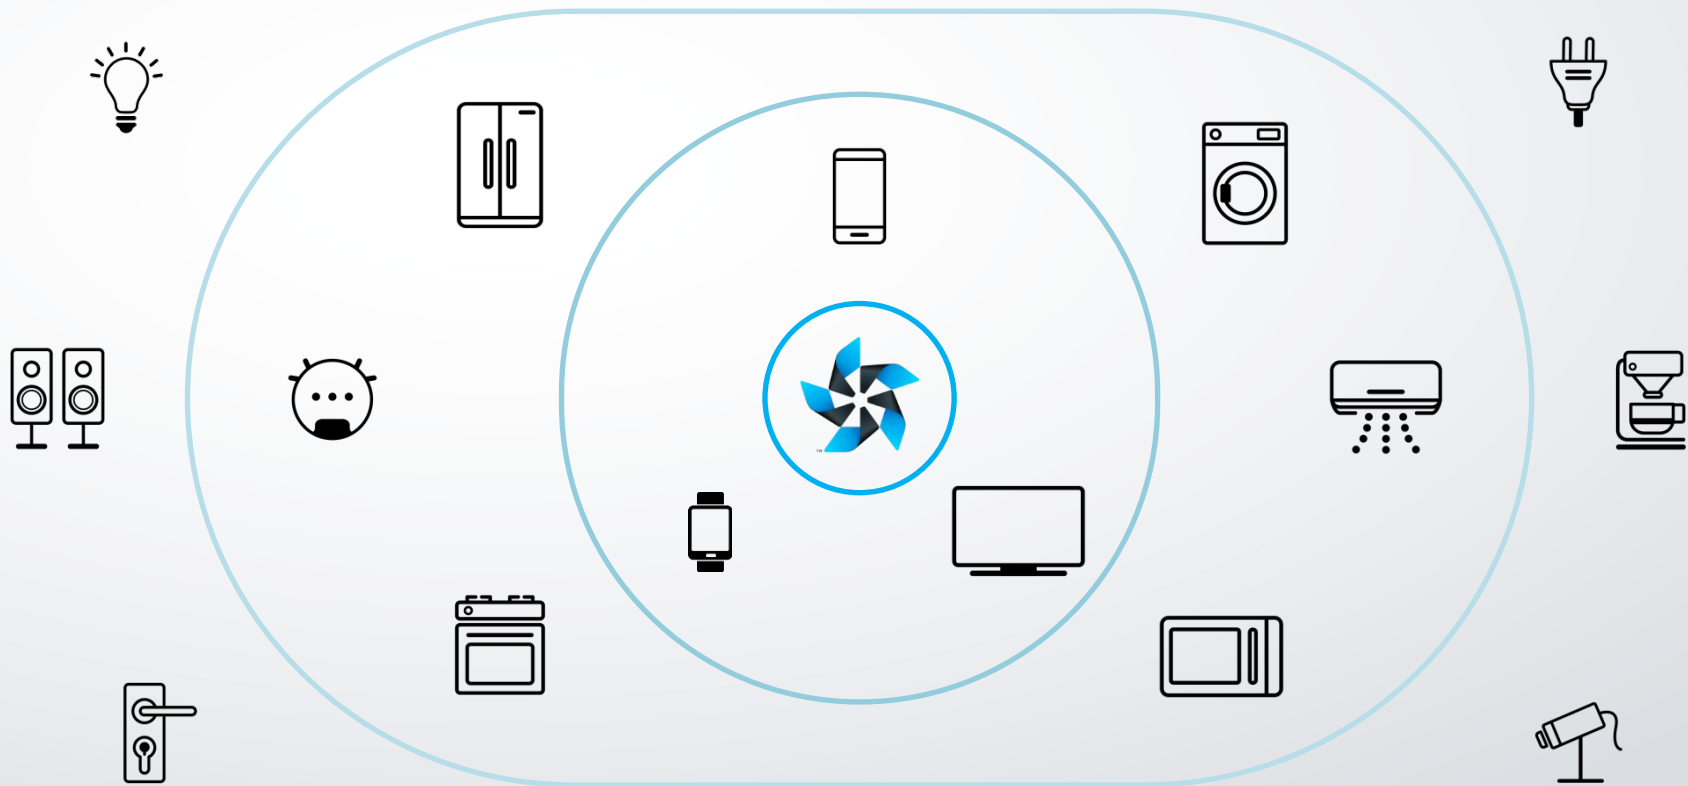

Outline

- **Background**
- **Concept Overview**
- **Key Feature & User Scenario**
- **How to use TIZEN PASS?**
- **Q&A**

The background features a light gray gradient with faint, concentric circular lines. On the left side, there is a stylized recycling symbol composed of three white triangular arrows forming a triangle. The symbol is decorated with blue and white striped patterns. Scattered around the symbol and extending towards the bottom center are numerous small, colorful confetti pieces in shades of blue, green, and white.

Background

TIZEN is expanding.

Few Devices

Few Tasks

User Experience will be

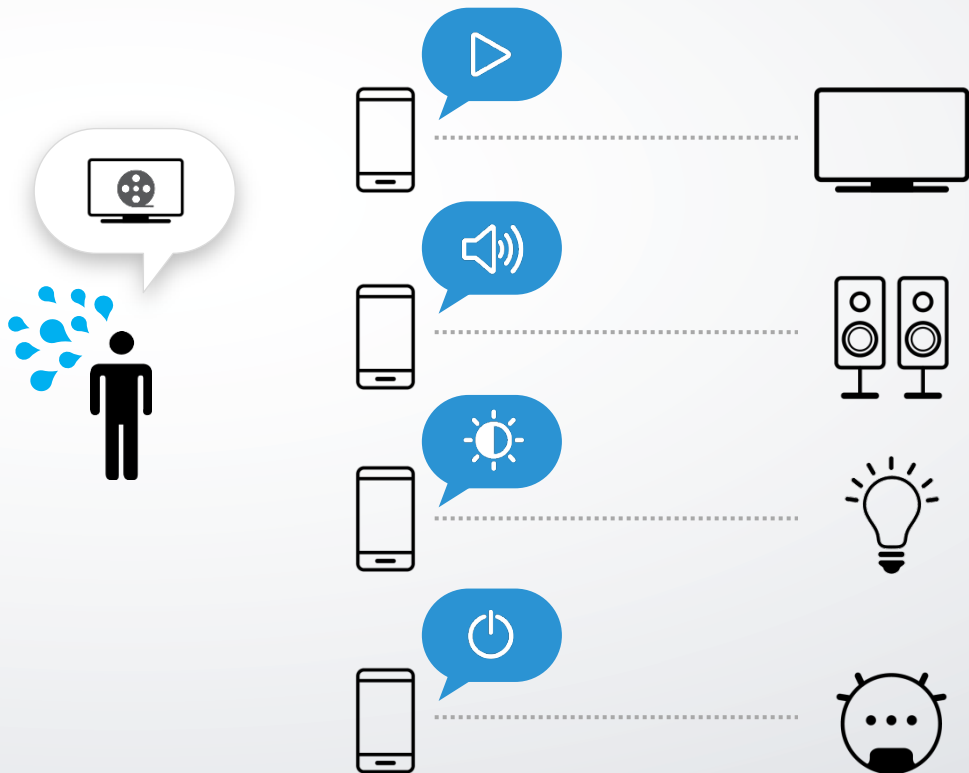

More Devices

So they might be doing

What it should be

TIZEN PASS

Concept Overview

New Convergence Experience
more suitable for **multi device environment**
that works via broadcasting method

“

*Tizen PASS aims to move beyond and 'Pass through' the existing barriers in multi-device environment.
It was also intended to resemble the act of 'Passing' an object from one to another for more intuitive understanding of the concept.*

”

What it Does

More Things

Let every device
welcome you

Developer

- More exposure which will lead to more app usage.
- Create rich experience by Tossed data from other apps.

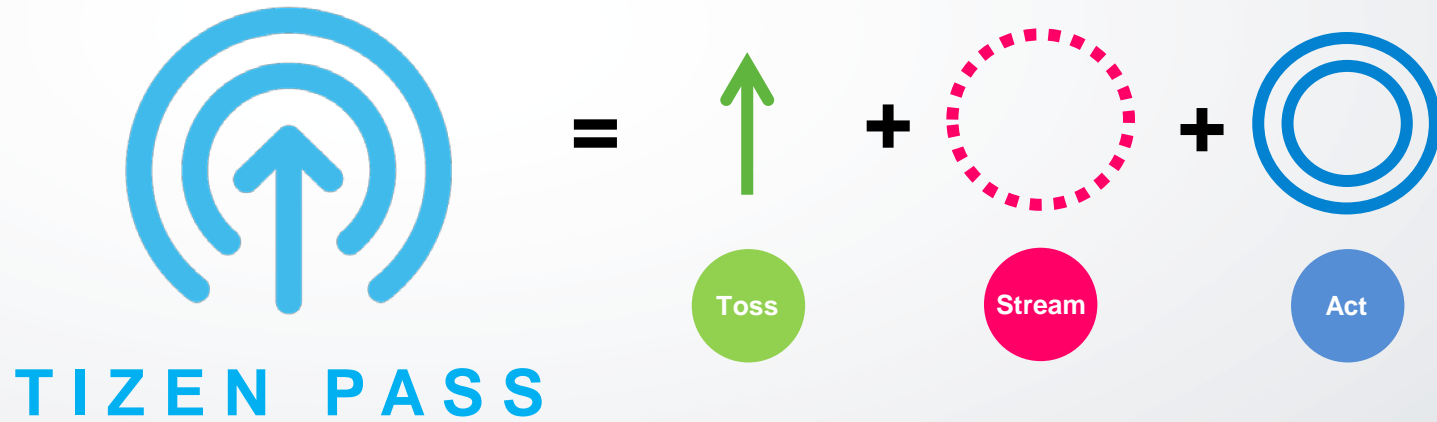

Ecosystem

- Encourage non-mobile players to join Tizen Eco
- Provide holistic experience that ties HW-SW-Service.

TIZEN PASS

How to use TIZEN PASS API?

Toss

Stream

Act

Toss the Data / Share the Data in Stream / Act with the Data

D2D Inter-App Communication

Transparent
NFS

D2D Service
Binding

Service Adaptor
(Service Federation)

Data

```
{  
  Target : all  
  Service: health  
  Type: streamed_data  
  User: Jane  
  
  { "state" : "running", "calories" : 7, "steps" : 40,  
    "distance" : 106, "speed" : 25, "heartrate" : 114 }  
}
```

D2D Inter-App Communication

- Header & Body Message Structure
- Key-Value Store
- JSON serialization

Toss

Stream

Act

Toss the Data / **share the Data in Stream** / Act with the Data

D2D Inter-App Communication

**Transparent
NFS**

**D2D Service
Binding**

Service Adaptor
(Service Federation)

T.NFS

Transparent NFS(Network FileSystem)

- Device to Device file operations
- Multiple transport layer
- Notifications support

D2D Service Binding

- Search convergence services
- Utilize IoTivity and SSDP
- Group-based sync management

Toss

Stream

Act

Toss the Data / share the Data in Stream / **Act with the Data**

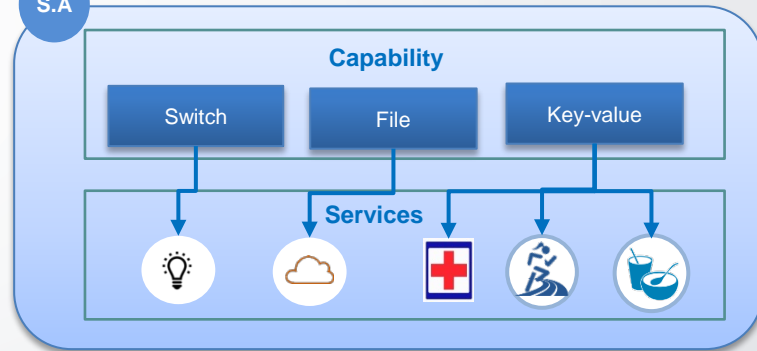

D2D Inter-App Communication

Transparent
NFS

D2D Service
Binding

**Service Adaptor
(Service Federation)**

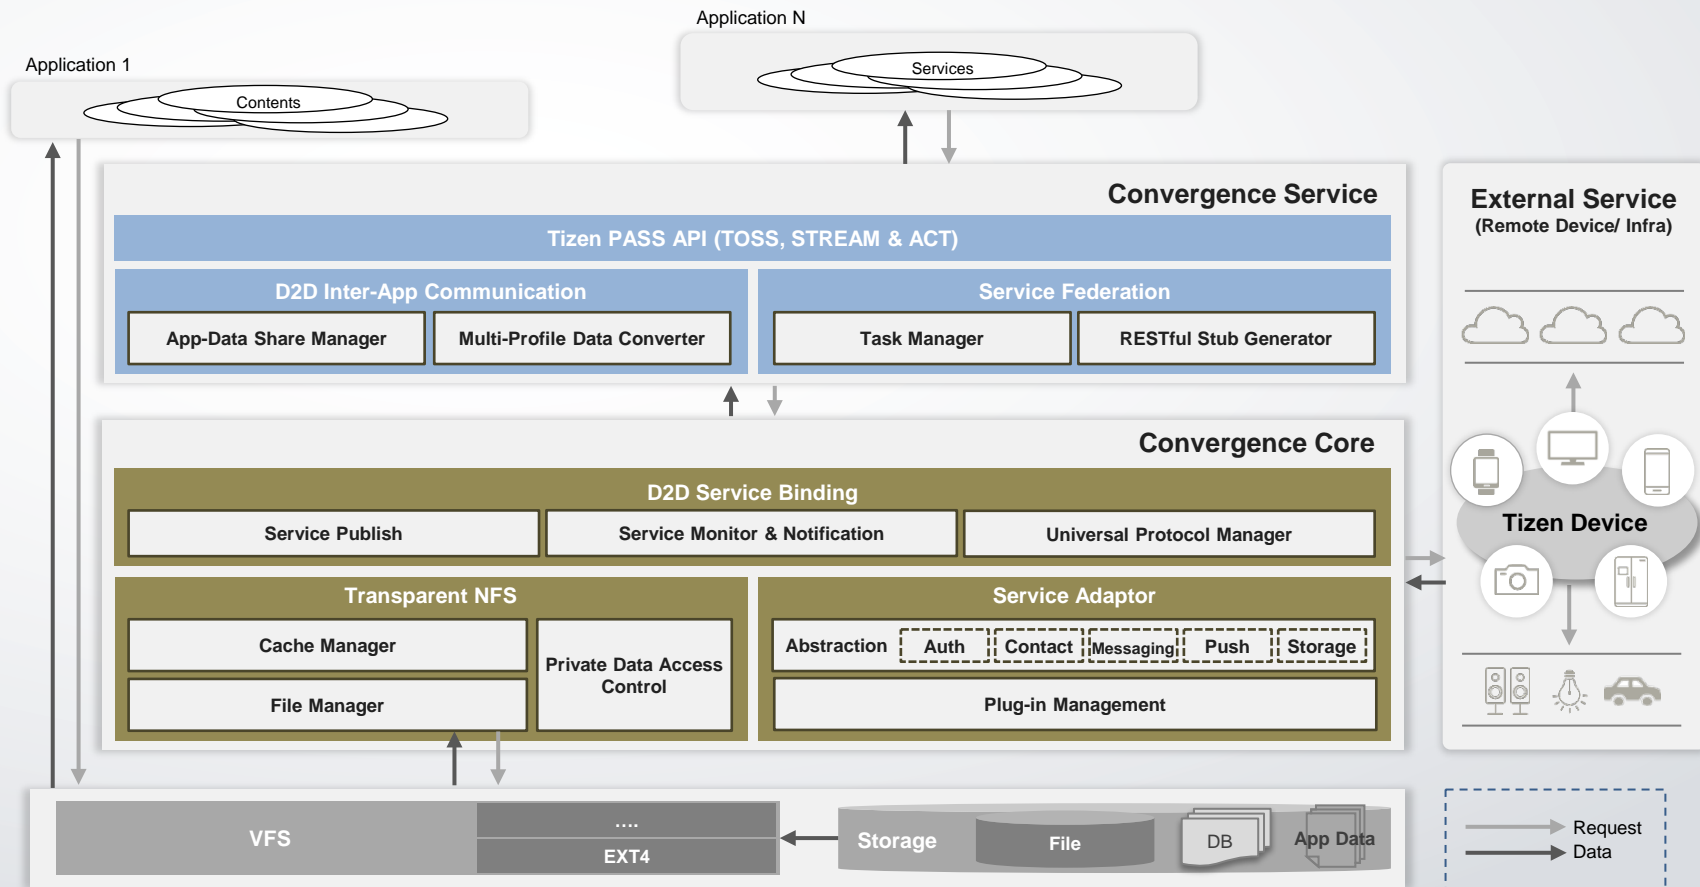

S.A

Service Adaptor (Service Federation)

- Access Rich Services via Uniform APIs
- Download Plug-in of Service Providers
- Integrate External Service directly into your App
- Syncing & Launching Service across Devices

Architecture

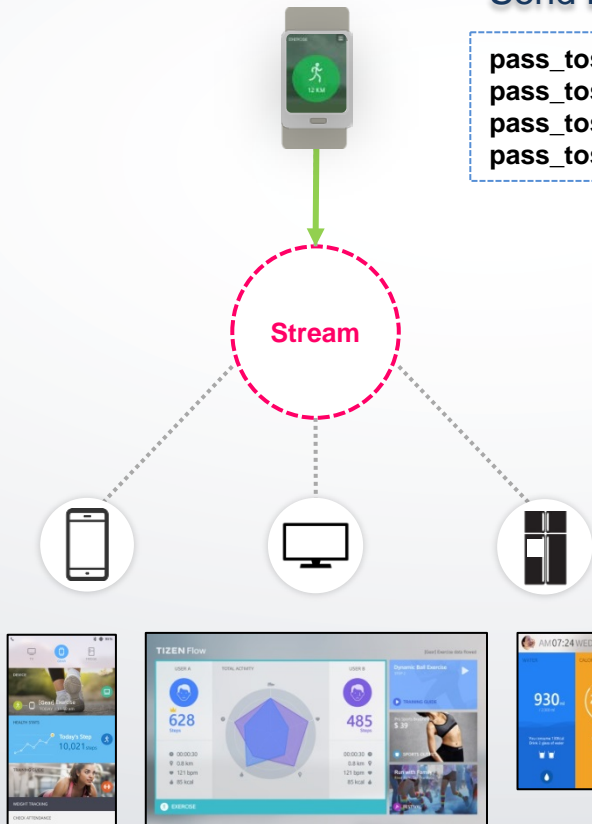

How to use the TIZEN PASS API | Contents PASS

Send Data to Stream

```
pass_toss_create(pass_toss_h *toss)
pass_toss_set_function(pass_toss_h toss, pass_function_h function)
pass_toss_add_data(pass_toss_h toss, const char *key, const char *value)
pass_toss_send_to_stream(pass_toss_h toss, pass_toss_cb callback, void *user_data)
```

Receive Data from Stream

```
pass_stream_create(pass_stream_h *stream)
pass_stream_add_watch(pass_stream_h stream, pass_function_h function,
    pass_stream_watched_toss_cb callback, void *user_data)
pass_stream_watched_toss_cb(pass_stream_h stream, pass_toss_h toss, void *user_data)
```

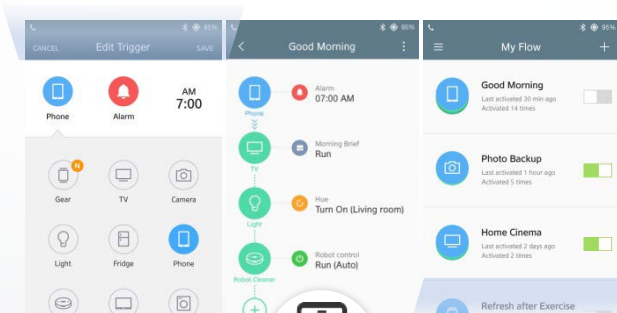

How to use the TIZEN PASS API | Action PASS

Single View on Stream

```
pass_stream_create(pass_stream_h *stream)
```

```
pass_stream_foreach_device(pass_stream_h stream, pass_device_cb callback, void *user_data)
```

```
pass_stream_add_watch(pass_stream_h stream, pass_function_h function, pass_stream_watched_toss_cb callback, void *user_data)
```

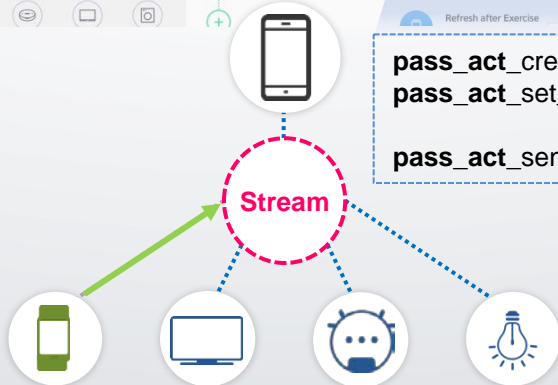

Launch Remote App across Tizen Devices

```
pass_act_create(pass_act_h *act)
```

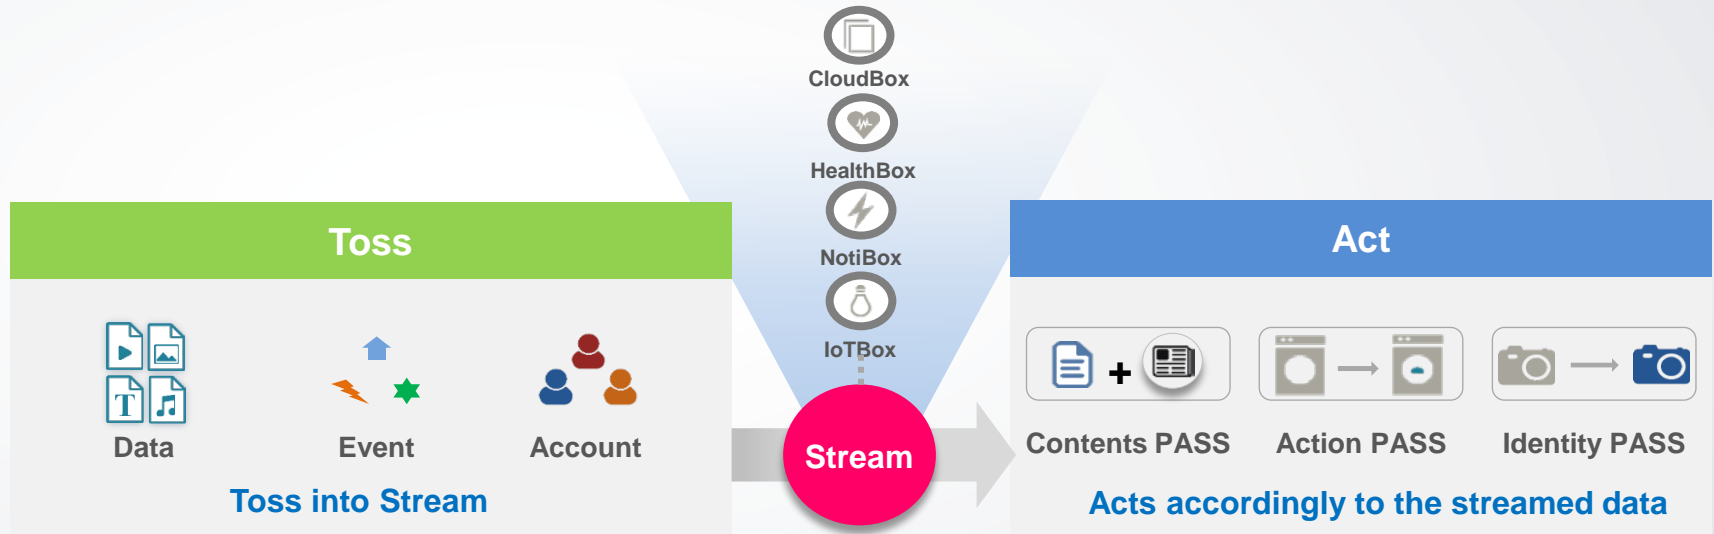

```
pass_act_set_function(pass_act_h act, pass_function_h function)
```

```
pass_act_add_data(pass_act_h act, const char *key, const char *value)
```

```
pass_act_send_launch_request(pass_act_h act, pass_act_cb callback, void *user_data)
```

Summary of Device Convergence

Easy Data Sharing & Remote App Control between Devices

D2D Inter-App Communication / Transparent NFS / D2D Service Binding / Service Adaptor
